

## Mission Statement

The mission of the School of Radiologic Technology is to provide for the education of radiologic technologists in a manner which reflects the mission and goals of the Harbor-UCLA Medical Center, the Los Angeles County Department of Health Services, California Department of Public Health, the American Society of Radiologic Technologists and the standards of the Joint Review Committee on Education in Radiologic Technology. The Radiologic Technology Program is to prepare students to become qualified imaging practitioners who are committed to the highest patient care, ethical standards, and technical practices while instilling the importance of professionalism. The twenty-four-month program curriculum includes the areas of routine diagnostic radiography, fluoroscopy, computed tomography, and orthopedic, pediatric, portable, and surgical radiography. The program curriculum also includes introductory clinical education in nuclear medicine, mammography, interventional radiology, ultrasound, magnetic resonance imaging, cardiovascular Catherization lab, and Dexa.
